Accu-Guide Instructions

Following a curve up and to the right.

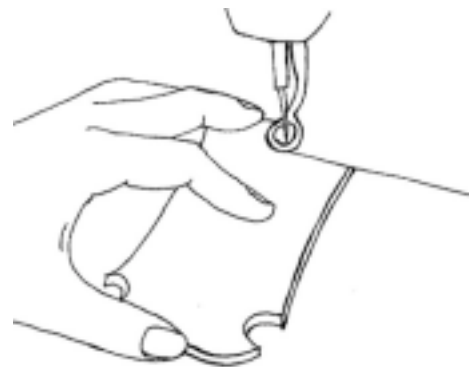

Place the cut-out of the Accu-Guide around the hopping foot. Hold it in position with the middle finger at the gentle dip-shape at the top and rest the thumb on the bottom edge. The guide creates pressure from the left and the right hand on the stop/go button provides pressure from the right side. This motion, effectively, gives you great control and steering ability of the hopping foot. It allows precise and accurate stitching around pre-printed items and applique pieces.

An alternate method of holding the Accu-Guide is shown here. Notice that it is gripped on the left and right sides of the Accu-Guide instead of the top and bottom.

Following a straight line.

Flip the guide over and use the straight edge of the guide to follow straight lines on the fabric and/or piecing. Great for Stitch-In-The Ditch. The partial curve around the hopping foot gives extra control and stability.

Following a curve up and to the left.

Using the alternate hopping foot cut-out allows you to stitch going the opposite direction. A real plus if you are left handed!
